

StorageCraft Granular Recovery

FOR EXCHANGE

Best-in-Class Granular Search and Recovery for Microsoft Exchange
Email Messages, Mailboxes, Folders, Contact, and Calendar Information

Introduction

Organizations need a reliable way to manage emails, calendars, folders, contacts, etc. In fact, much of an organization's critical information between employees, customers, and partners takes place through email. Microsoft Exchange has proven to be the dominant global leader in the on-premise corporate email market. Whether you use Microsoft Exchange or not, it has become the heart of communication in organizations both large and small.

The Need

Unfortunately, not all Microsoft Exchange Servers are managed or maintained equally. In today's fast-paced business world, users can't afford delays in communication or the inability to retrieve critical information when they need it most. And for those who accidentally delete an email, or just can't seem to find that all-important email from a month or so ago, it can be extremely costly and inefficient to the business if the proper tools are not already in place to help recover quickly and easily under these scenarios.

The Solution

By adding award-winning StorageCraft® Granular Recovery for Exchange to backup and recovery tools already in place, administrators and service providers can perform complete granular search and recovery capabilities for Microsoft Exchange at the click of a button. StorageCraft Granular Recovery for Exchange allows administrators to quickly recover individual email messages, mailboxes, attachments, or even multiple mailboxes directly from an Exchange database (EDB) file. The easy-to-use interface enables an administrator to recover from an Exchange backup to a production Exchange server or PST file in minutes. They can quickly navigate to a specific mailbox and simply drag-and-drop the entire mailbox to the end user's production environment, or recover individual email messages, attachments, or other mailbox items as needed.

Capability Overview

Email Search: StorageCraft Granular Recovery for Exchange is a powerful search tool that allows administrators to search mailboxes and email messages based on criteria they specify, directly from an EDB file. Search the Exchange database for specific keywords, or use the Advanced Search option to search based on message dates, senders, recipients, or subject matter.

Capability Overview (CONTINUED)

Database Search: Administrators can also use StorageCraft Granular Recovery for Exchange to quickly search across Exchange server database files including Database Availability Groups (DAG) and Client Access Server (CAS) roles. By adding StorageCraft Granular Recovery for Exchange to the tools you're already using, you have complete search and recovery of Exchange servers and critical email data.

Recovery: StorageCraft Granular Recovery for Exchange can recover one or more mailboxes, as well as individual email messages, attachments, and other mailbox content items quickly and easily. Administrators can throttle data transfers to better manage network traffic during recovery projects.

Compatibility and Flexibility: StorageCraft Granular Recovery for Exchange can be used with any backup software* for easy Exchange recovery. Users can also select alternative temporary database locations when limited on hard drive space.

StorageCraft Granular Recovery for Exchange Supports:

- Microsoft Exchange Server 2016, 2013, 2010, 2007, 2003

Features and Benefits

Feature	Benefit
Mailbox Recovery	Restore one or more mailboxes with ease. Recover individual or multiple mailboxes from an Exchange database (EDB) file fast. Organizations can use an EDB file from a backup of their Exchange database created with any backup software*
Granular Email Recovery	Restore individual email messages, attachments, and other mailbox content items quickly and easily
Bandwidth Management	Throttle data transfers to better manage network traffic during recovery projects
